## **TREATMENT & CARE OF DOMESTIC & GAME HATCHING EGGS**

### **A BRIEF GUIDE**

Collect eggs as often as practical in ROTOMAID baskets.

Clean and sanitise the dirty eggs as soon as possible in a ROTOMAID using ROTOSAN egg washing powder/liquid. The sooner the eggs are cleaned and sanitised the higher the hatchability.

Allow the eggs to dry in the baskets.

Dip the eggs into ROTOGARD solution in a separate ROTOMAID bucket - allow to dry. Protect the eggs from reinfection.

Wash hands in ROTOSOAP prior to handling treated eggs.

Place clean eggs on new trays and, if necessary, store in a cool vermin proof damp shed or cellar before placing in the incubator or under broody hens. Do not store for longer than 10 days, preferably less than a week.

Further details on the following pages.
